

Latexkissen FlexiNet®

Mod. 40/3, 5

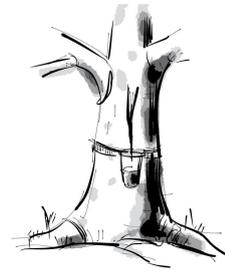

GRÖSSEN UND MASSANGABEN

Höhe in cm	10	12
Breite in cm	60	60
Tiefe in cm	33	33

NATURAL RUBBER

Natural rubber

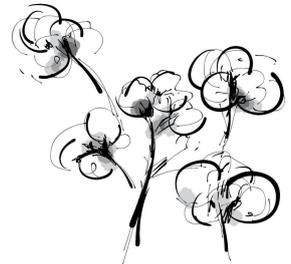

Natural rubber, known to many as "latex", is extracted from the milk of the tropical "natural rubber tree" *Hevea brasiliensis*. It is a sustainable product from controlled plantation management. Due to its special molecular structure, natural rubber has a **unique climatic and ergonomic functionality and can therefore adapt perfectly to the human anatomy**. Natural rubber has a temperature-balancing and antibacterial effect. However, not all latex is the same. For example, 6 - 10 times more energy is used to produce synthetic latex than natural rubber.

COTTON

Cotton

Cotton is a plant fibre and is one of the oldest cultivated plants. The raw material comes mainly from the North African and Asian regions. Cotton at JOKA is hand-picked, not chemically defoliated, not bleached and not dyed. Only "kbA" quality (controlled organic cultivation) and "organic cotton" (organically fertilised) goods are used. **Cotton has an antistatic effect.**

UPHOLSTERY OPTIONS

FlexiNet®

The secret of the patented FlexiNet® system lies in the interweaving of high-quality cold foam bars. This ensures the unique ventilation of the upholstery and guarantees an optimal microclimate.
